

## F18

## Versions

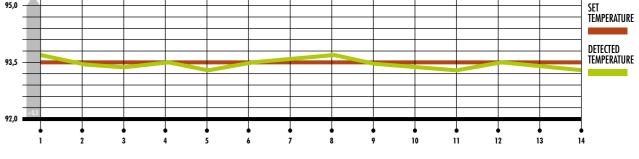

_Technical data		2 group	3 group
voltage	۷	220-240 1N /	⁄ 380-415 3N
power imput	kW	6.32	7.2
steam boiler capacity	US gal / It	2.27 / 8.6	3.7 / 14
steam boiler power	kW	3.8	3.8
pump power	kW	0.15	0.15
boiler capacity	US gal / It	0.26 / 1	0.39 / 1.5
boiler element power	kW	1	1.5
cup-heater power	kW	0.2	0.25
net weight	lb / kg	214 / 97	265 / 120

_Colors		
	Black Matte black	RAL 9005
	White Black	RAL 9003 9005
	Blue Matte black	RAL 5024 9005

mixed water COLD INJECTION ≤ HOT INJECTION T1 MIXER **GROUPS' BOILER** T2 Each group has a dedicated Thanks to the Multiboiler Realtime Stability boiler powered by system it is possible to set - for each single preheated water thanks to distribution group – the temperature of the mixing of cold and hot the coffee boilers, in accordance with the water coming from the heat exchangers; the group is blend and/or the single-origin coffee used. kept at the ideal temperature The system can guarantee a complete by a specific resistor, which independence between the distribution ensure a perfect thermal regulation. of coffee and steam, ensuring that the two actions do not affect each other, thus compromising a good outcome. 95.0

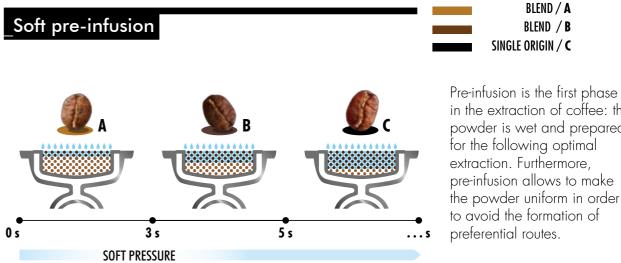

The electronic control unit is equipped with a PID temperature management system, which independently regulates the coffee boilers and the heating of the individual groups.

Tempcontrol

Multiboiler System

Thanks to this system, a very high level of thermal stability is guaranteed, with a calibrated variation of  $\pm$  0,2°C for a perfect extraction of coffee.

in the extraction of coffee: the powder is wet and prepared for the following optimal extraction. Furthermore, pre-infusion allows to make the powder uniform in order to avoid the formation of preferential routes.
